

Webinar on Innovative Methods for Defining Census Areas

Wednesday 2 December, 17.00-18.00 Central European Time

The Global Forum for Geography and Statistics (GFGS), the United Nations Economic Commission for Europe (UNECE) and the European Free Trade Association (EFTA) have joined forces to bring you a webinar to discuss and share examples of innovative methods for defining census areas.

The webinar will start with presentations of new approaches from Statistics Portugal and UNFPA (on behalf of the GRID3 Project), followed by an open discussion on ideas, experiences and good practices.

Target audience: People working with statistical and geospatial information in national statistical offices, national mapping and cartographic agencies and academia.

For more information and to register for this webinar, please see:
