

Analysis of the Utilisation of EFTA's Free Trade Agreements

FTA Monitor

Updated version August 2023

Background Information

The EFTA FTA Monitor summarises the most important information for each of EFTA's free trade agreements (FTAs) on the import and export side. In addition to general information on bilateral trade, this includes a comparison of FTA and most-favoured nation (MFN) tariffs as well as tariff savings and preference utilisation rates. The aim of the FTA Monitor is to enable an interested reader to see all relevant figures at a glance in order to identify both successes and potential for improvement.

For each FTA partner country, one page is devoted to goods imported by EFTA and one page to goods exported by EFTA to said country, when available.

Methodology: The preference utilisation rate (PUR)

In order to calculate and compare the use of FTAs across time and countries, the FTA Monitor uses one central indicator, the preference utilisation rate (PUR):

$$\text{Preference utilisation rate (\%)} = \frac{\text{Trade value of preferences used}}{\text{Trade value of preferences that could be used}}$$

The PUR represents the value of traded goods for which economic operators actually make use of the FTA in relation to the total value of traded goods for which economic operators are entitled to make use of the FTA.¹

Scope

The scope of the EFTA FTA Monitor covers both imports and exports between EFTA and FTA partner countries for the period 2018-2021.

For imports, all of EFTA's FTA partners are covered by the study, based on the data of the customs authorities of individual EFTA Member States. Indonesia has been excluded from the analysis as the relevant FTA entered into force recently (in November 2021) and therefore lies outside the scope of the analysis for 2018-2021. The Principality of Liechtenstein belongs to the Swiss customs territory and its trade is included in the Swiss trade statistics.

For exports, the FTA Monitor relies on data provided by FTA partner countries who have agreed to exchange the data required for this analysis. Consequently, the scope on the export side is limited to those countries who have provided such data, namely Albania, Bosnia and Herzegovina, Canada, Chile, Colombia, Costa Rica, Ecuador (2021; entry into force of FTA in November 2020), Georgia (2021), Hong Kong, China, Montenegro (2018-2020), Mexico (2018-2020), Panama (2021), Peru (2019-2021), the Philippines (2019-2021; entry into force of FTA for most parties in June 2018),

¹Further details regarding the methodology for the FTA Monitor can be found in the [Swiss study](#).

the Republic of Korea, Serbia, Singapore, and Türkiye. In the coming months and years, EFTA expects that more FTA partners will share their import data so that the FTA Monitor can be updated accordingly.

Limitations

The data on preference utilisation in this report is based on import data collected and processed by different parties. Thus, the existence of different sources for the import data might limit the accuracy of the output due to possible differences in data and methods used.

Imports of gold (tariff line 7108.12) are excluded from the analysis as per standard practice in EFTA's statistics. In addition, preferences within tariff rate quotas, variable tariffs (e.g. price band systems or inputs-based tariffs) and ex-outs within tariff lines have not been considered in the calculations due to the difficulty to quantify them through customs statistics. Imports under preferential schemes other than FTAs have been included in the analysis of overall trade flows, but not in the assessment of applicable tariff rates and preference utilisation given the lack of data on the tariffs applicable under those schemes.

Subject to national laws, regulations and procedures in the EFTA Member States and their FTA partners, trade under certain tariff lines may be confidential and therefore not be shown in the monitor. As a result, trade under certain tariff lines has been removed from the tables in the lower part of each country page to ensure statistical confidentiality.

Furthermore, specific and compound duties have been converted to ad-valorem equivalents (AVEs) for analytical purposes. Those AVEs constitute an attempt at best approximation and may sometimes not fully reflect the exact tariff equivalent of effectively paid duties. For many tariff lines, EFTA Member States employ specific tariffs (e.g. Switzerland: 200 Swiss francs per 100 kg) or compound tariffs (e.g. Iceland: 30% and 95 ISK per piece). On the import side, AVEs have been obtained by calculating the average product value per underlying volume for global imports of the respective EFTA State at the HS8-digit product level and per individual year. This value is then in turn used to approximate AVEs. Imports from the entire world have been used instead of imports from the respective partner state only as values per unit would have been subject to substantive variation in the latter case. On the export side, ad-valorem equivalents (less important value-wise than on the import side) have been calculated based on the trade data provided by the partner state.

Explanation of the FTA Monitor

Information

The upper part of each country page contains information on the FTA and bilateral trade including the entry into force of the FTA and trade values for 2021 with and without trade in gold (tariff line 7108.12). Values are indicated consistently in USD. Moreover, the duty-free share of imports/exports and the corresponding trade value are indicated. For imports, duty-free trade across all trade regimes, i.e. including other preferential schemes, is displayed. For exports, duty-free trade under MFN and the FTA is indicated. The information section also details the PUR for 2019-2021. In instances where the PUR is not applicable (e.g. if the FTA in question was not in force at the beginning of the specific year or all imports occurred under MFN zero), a “–” is indicated.

Graphs

Below, the different graphs depicted in the FTA Monitor and their meaning are explained. It is important to recall that the data analysed and results presented do not represent total trade flows but only a subset thereof. As mentioned previously, gold as well as products with import quotas have been excluded from the analysis.

The first graph (top left) shows the imports or exports for all four analysed years (2018-2021), illustrated according to the four trade regimes: FTA, MFN zero, MFN, and other preferences. The graph therefore gives an overview of the relevance of the different trade regimes, including the relevance of the particular FTA. Results can vary significantly depending on the tariff structure of countries. For example, the FTA Monitor on exports to Hong Kong, China and Singapore shows that all exports were categorised as MFN zero. Regarding the category “other preferences”, categorisations may vary across customs authorities. For example, some countries include Generalised System of Preferences (GSP) preferences in this category while others do not. Trade under “other preferences” may be duty free and therefore by definition lowers the use of FTA preferences for some partners, as it is the case for Canada for example. Due to a lack of data on applicable tariffs, trade under “other preferences” is excluded from the PUR analysis.

The second graph (top right) shows applicable tariff duties in 2021, comparing the MFN tariff duties to the optimal (lowest) tariff duties when utilising the FTA. Optimal tariff duties are equal to the MFN tariff duties if there are no concessions within the FTA. The graph also shows the actually paid duties, which lay between the MFN and the (optimal) FTA tariff duties. In the absence of data on applicable duties under “other preferences” schemes, the assumption was made that duties under other preferential schemes were equal to 0. In a few specific instances where trade under “other preferences” schemes is predominant (e.g. Namibia or Botswana), the line for actually paid duties thus lies below the FTA duties line. The horizontal axis represents the value of all imports or exports, beginning with the lowest tariffs on the left. It is important to note that the graph only shows tariff duties for products that were actually traded in 2021. Nonetheless, the graph shows how large the

preference margin is and to what extent preferential tariff duties are being used (how close is the blue line to the green line?). To simplify comprehension, we use ad-valorem tariffs (in % of goods values) as explained in the limitations above.

The third graph (bottom left) shows tariff duties revenue. In addition to the duties actually paid, the hypothetical tariff savings have been included both in the graph and numerically in the heading. These hypothetical tariff savings are calculated by multiplying trade flows with the respective FTA or MFN tariffs.

The fourth graph (bottom right) compares the aggregated utilisation rates over the past years, allowing for a comparison of the use of each FTA over the time period for which data is available.

Table

In the lower part of each country page, the FTA Monitor features a table with key figures for selected products. The product groups refer to the [Harmonized System of the World Customs Organization, 2017 version](#). The first part of the table displays the ten most important product groups (2-digit HS codes), sorted by trade value. In the lower section, the top ten products (6-digit HS codes) with the largest non-achieved tariff savings are listed. In instances where the PUR is 100% or not applicable (e.g. if trade occurs under MFN zero as in the case of EFTA's exports to Hong Kong), no information on the corresponding product(s) is provided in the lower section of the table. For all products/product groups, the trade values are shown according to trade regimes, the PUR, as well as the achieved and non-achieved tariff savings. If there is an indication of "0.00", the corresponding value may be at a lower-digit level. Additional information on the products with the highest non-achieved tariff savings can be obtained by clicking on the hyperlinks to the dedicated sections of the World Customs Organization website provided in the lower part of the table.

Explanations on the FTA Monitor

The upper part contains some general information and key figures.

Total imports/exports

Date of entry into force of the FTA

Value and share of duty-free imports/exports

PUR from 2019-2021

Imports/exports without gold and TRQs (if applicable)

The relevant limitations are specified.

Decomposition of imports/exports over the past years by trade regime.

Hypothetical customs duties on products imported/exported in 2021 (excluding non-traded products).

Transactions in recent years according to the trade regime (FTA, MFN zero, MFN, other preferential treatment).

Comparison of FTA, MFN and actually paid duty rates on goods imported in 2021.

Hypothetical tariff revenue according to FTA or MFN over time.

Green: Achieved tariff savings. Red: Non-achieved tariff savings.

Comparison of preference utilisation rates over time.

Duty revenue if all imports had been made under FTA or MFN clauses.

Actually paid tariffs are also indicated. The coloured areas show the realised and the non-realised tariff savings.

The preference utilisation rates over time are indicated.

Product group	HS Code	Imports/Exports (in millions/thousands of USD)					Utilisation Rate (%)	Tariff savings achieved non-achieved (in thousands of USD)	
		Total	MFN	MFN-zero	FTA	other		achieved	non-achieved

The total import/export value is indicated.

The top-ten product categories (two-digit HS codes) sorted by import/export value are displayed.

Top-10 product groups with highest import/export values

Top-10 products with highest non-ach.
tariff savings

*The top-ten products (six-digit HS codes) with the greatest non-realised savings potential are displayed.
The detailed HS tariff headings are available by clicking on the hyperlink in the HS code column.*

List of abbreviations

- **FTA:** Free trade agreement
- **HS:** Harmonized System
- **MFN:** Most-favoured nation
- **Other pref.:** Other preferential schemes
- **PUR:** Preference utilisation rate
- **TRQ:** Tariff-rate quota
- **USD:** United States dollar

Total imports: 34.52 mln. USD

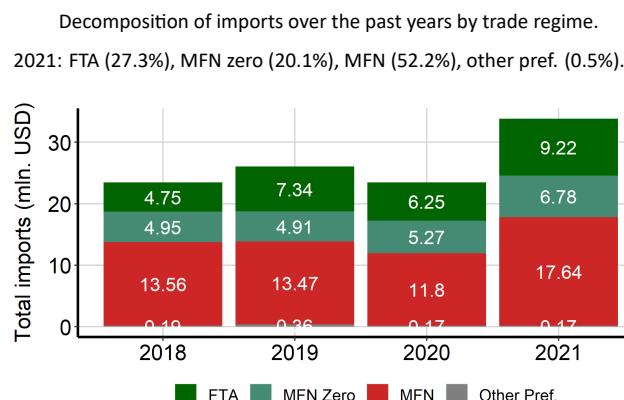

Duty-free imports: 16.1 mln. USD, 46.6% of total imports

Imports without gold and TRQs: 33.82 mln. USD

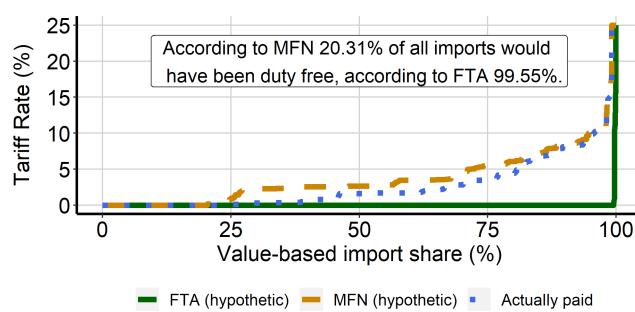

Date of entry into force of the FTA: 01.11.2010

Preference utilisation rate: 35.3% (2019), 34.6% (2020), 34.4% (2021)

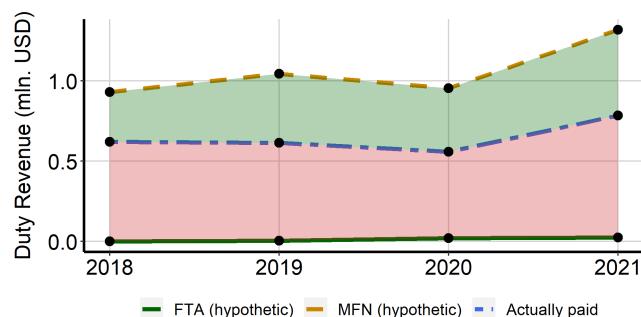

Analysis of imports without unwrought gold (7108.12) and TRQs for Switzerland. Preferences within TRQs, variable tariffs and ex-outs within tariff lines have not been considered. Confidential trade is excluded from the tables.

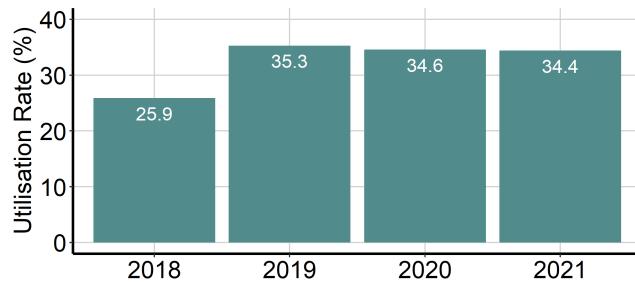

Hypothetical customs duties on products imported in 2021
(excluding non-traded products).

Hypothetical duty revenue according to MFN or FTA.
Green: achieved tariff savings (2021: 533'050 USD, savings rate: 41.3%).
Red: non-achieved tariff savings (2021: 758'890 USD).

Comparison of aggregated utilisation rates over the past years.

	Product group	HS code	Imports (in millions of USD)				Utilisation Rate (%)	Tariff savings achieved non-achieved (in thousands of USD)
