

Analysis of the Utilisation of Tariff Preferences Among the EFTA States

The Principality of Liechtenstein belongs to the Swiss customs territory and its trade is therefore included in the trade statistics of Switzerland.

October 2023

Background Information

This Monitor summarises the most important information on EFTA-internal trade for the period 2018-2021. In addition to general information on bilateral trade between the EFTA States, this includes a comparison of preferential tariffs under the EFTA Convention or, where applicable for Iceland and Norway, the European Economic Area (EEA) and most-favoured nation (MFN) tariffs as well as tariff savings and preference utilisation rates. The aim of the Monitor is to enable an interested reader to see all relevant figures at a glance in order to identify both successes and potential for improvement.

Methodology: The preference utilisation rate (PUR)

In order to calculate and compare the use of preferences across time and countries, the Monitor uses one central indicator, the preference utilisation rate (PUR):

$$\text{Preference utilisation rate (\%)} = \frac{\text{Trade value of preferences used}}{\text{Trade value of preferences that could be used}}$$

The PUR represents the value of traded goods for which economic operators actually make use of preferences in relation to the total value of traded goods for which economic operators are entitled to make use of preferences.¹

Scope

The Monitor covers trade between the EFTA States for the period 2018-2021. The Principality of Liechtenstein belongs to the Swiss customs territory and its trade is included in the Swiss trade statistics.

Limitations

The data on preference utilisation in this report is based on import data collected and processed by different parties. Thus, the existence of different sources for the import data might limit the accuracy of the output due to possible differences in data and methods used.

Imports of gold (tariff line 7108.12) are excluded from the analysis as per standard practice in EFTA's statistics. In addition, preferences within tariff rate quotas, variable tariffs (e.g. price band systems or inputs-based tariffs) and ex-outs within tariff lines have not been considered in the calculations due to the difficulty to quantify them through customs statistics. Imports under preferential schemes other than the EFTA Convention or EEA have been included in the analysis of overall trade flows, but not in the assessment of applicable tariff rates and preference utilisation given the lack of data on

¹Further details regarding the methodology can be found in the [Swiss study](#).

the tariffs applicable under those schemes.

Subject to national laws, regulations and procedures in the EFTA States, trade under certain tariff lines may be confidential and therefore not be shown in the monitor. As a result, trade under certain tariff lines has been removed from the tables in the lower part of each country page to ensure statistical confidentiality.

Furthermore, specific and compound duties have been converted to ad-valorem equivalents (AVEs) for analytical purposes. Those AVEs constitute an attempt at best approximation and may sometimes not fully reflect the exact tariff equivalent of effectively paid duties. For many tariff lines, EFTA States employ specific tariffs (e.g. Switzerland: 200 Swiss francs per 100kg) or compound tariffs (e.g. Iceland: 30% and 95 ISK per piece). AVEs have been obtained by calculating the average product value per underlying volume for global imports of the respective EFTA State at the HS8-digit product level and per individual year. This value is then in turn used to approximate AVEs. Imports from the entire world have been used instead of imports from the respective trading partner only as values per unit would have been subject to substantive variation in the latter case.

Explanation of the Monitor

Information

The upper part of each country page contains general information about the bilateral trade relationship in question, incl. trade values for 2021 with and without trade in gold (tariff line 7108.12). Values are indicated consistently in USD. Moreover, the duty-free share of imports/exports and the corresponding trade value are indicated. Duty-free trade across all trade regimes, i.e. including other preferential schemes, is displayed. The information section also details the PUR for the past three years.

Graphs

Below, the different graphs depicted in the Monitor and their meaning are explained. It is important to recall that the data analysed and results presented do not represent total trade flows but only a subset thereof. As mentioned previously, gold as well as products with import quotas have been excluded from the analysis.

The first graph (top left) shows the imports or exports for all four analysed years (2018-2021), illustrated according to the four trade regimes: EFTA Convention/EEA, MFN zero, MFN, and other preferences. The graph therefore gives an overview of the relevance of the different trade regimes. Results can vary significantly depending on the tariff structure of countries. Trade under “other preferences” may be duty free and therefore by definition lowers the use of the EFTA Convention/EEA. Due to a lack of data on applicable tariffs, trade under “other preferences” is excluded from the PUR analysis.

The second graph (top right) shows applicable tariff duties in 2021, comparing the MFN tariff duties to the optimal (lowest) tariff duties when utilising the EFTA Convention/EEA. Optimal tariff duties are equal to the MFN tariff duties if there are no concessions within the EFTA Convention/EEA. The graph also shows the actually paid duties, which lay between the MFN and the (optimal) EFTA Convention/EEA duties. In the absence of data on applicable duties under “other preferences” schemes, the assumption was made that duties under other preferential schemes were equal to 0. The horizontal axis represents the value of all imports or exports, beginning with the lowest tariffs on the left. It is important to note that the graph only shows tariff duties for products that were actually traded in 2021. Nonetheless, the graph shows how large the preference margin is and to what extent preferential tariff duties are being used (how close is the blue line to the green line?). To simplify comprehension, we use ad-valorem tariffs (in % of goods values) as explained in the limitations above.

The third graph (bottom left) shows tariff duties revenue. In addition to the duties actually paid, the hypothetical tariff savings have been included both in the graph and numerically in the heading. These hypothetical tariff savings are calculated by multiplying trade flows with the respective preferential or MFN tariffs.

The fourth graph (bottom right) compares the aggregated utilisation rates over the past three years, allowing for a comparison over the time period for which data is available.

Table

In the lower part of each country page, the Monitor features a table with key figures for selected products. The product groups refer to the [Harmonized System of the World Customs Organization, 2017 version](#). The first part of the table displays the ten most important product groups (2-digit HS codes), sorted by trade value. In the lower section, the top ten products (6-digit HS codes) with the largest non-achieved tariff savings are listed. For all products/product groups, the trade values are shown according to trade regimes, the PUR, as well as the achieved and non-achieved tariff savings. If there is an indication of “0.00”, the corresponding value may be at a lower-digit level. Additional information on the products with the highest non-achieved tariff savings can be obtained by clicking on the hyperlinks to the dedicated sections of the World Customs Organization website provided in the lower part of the table.

Explanations on the EFTA Preferential Trade Monitor

The upper part contains some general information and key figures.

Total imports/exports

Date of entry into force of the EFTA Convention

Value and share of duty-free imports/exports

PUR from 2019-2021

Imports/exports without gold and TRQs (if applicable)

The relevant limitations are specified and background information on the composition of EFTA pref. trade (with or without EEA trade) is provided.

Decomposition of imports/exports over the past years by trade regime.

Hypothetical customs duties on products imported/exported in 2021 (excluding non-traded products).

Transactions in recent years according to the trade regime (EFTA pref., MFN zero, MFN, other preferential treatment).

Comparison of EFTA pref., MFN and actually paid duty rates on goods imported in 2021.

Hypothetical tariff revenue according to EFTA pref. or MFN over time.

Comparison of preference utilisation rates over time.

Green: Achieved tariff savings. Red: Non-achieved tariff savings.

Duty revenue if all imports had been made under EFTA pref. or MFN clauses. Actually paid tariffs are also indicated. The coloured areas show the realised and the non-realised tariff savings.

The preference utilisation rates over time are indicated.

Product group	HS Code	Imports/Exports				Utilisation Rate (%)	Tariff savings	
		Total	MFN	MFN-zero	EFTA pref.		achieved	non-achieved
		(in millions/thousands of USD)					(in thousands of USD)	

The total import/export value is indicated.

The top-ten product categories (two-digit HS codes) sorted by import/export value are displayed.

Top-10 product groups with highest import/export values

The top-ten products (six-digit HS codes) with the greatest non-realised savings potential are displayed. The detailed HS tariff headings are available by clicking on the hyperlink in the HS code column.

Top-10 products with highest non-ach. tariff savings

List of abbreviations

- **EEA:** European Economic Area
- **EFTA pref.:** EFTA preferential trade (either under EFTA Convention or EEA, where applicable)
- **HS:** Harmonized System
- **MFN:** Most-favoured nation
- **Other pref.:** Other preferential schemes
- **PUR:** Preference utilisation rate
- **TRQ:** Tariff-rate quota
- **USD:** United States dollar

Iceland: Imports from Norway 2021

Total imports: 0.73 bln. USD

Date of entry into force of the EFTA Convention: 03.05.1960

Duty-free imports: 710.89 mln. USD, 97.4% of total imports

Preference utilisation rate: 97.8% (2019), 99.4% (2020), 97.8% (2021)

EFTA preferential trade includes trade under the EFTA Convention and EEA.

Decomposition of imports over the past years by trade regime. 2021:
EFTA pref. (0.7%), MFN zero (91.7%), MFN (5.7%), other pref. (1.9%).

Hypothetical customs duties on products imported in 2021
(excluding non-traded products).

Hypothetical duty revenue according to MFN or EFTA pref.

Green: achieved tariff savings (2021: 130'860 USD, savings rate: 99.8%).
Red: non-achieved tariff savings (2021: 310 USD).

Comparison of aggregated utilisation rates
over the past years.

Switzerland: Imports from Norway 2021

Imports

Total imports: 513.22 mln. USD

Date of entry into force of the EFTA Convention: 03.05.1960

Duty-free imports: 479.65 mln. USD, 93.5% of total imports

Preference utilisation rate: 87.2% (2019), 87.6% (2020), 83.9% (2021)

Imports without gold and TRQs: 406.5 mln. USD

EFTA preferential trade includes trade under the EFTA Convention. Analysis of imports without unwrought gold (7108.12) and TRQs. Preferences within TRQs, variable tariffs and ex-outs within tariff lines have not been considered.

Decomposition of imports over the past years by trade regime. 2021:

EFTA pref. (39.7%), MFN zero (49.1%), MFN (7.8%), other pref. (3.5%).

Hypothetical customs duties on products imported in 2021 (excluding non-traded products).

Hypothetical duty revenue according to MFN or EFTA pref.

Green: achieved tariff savings (2021: 6'047'150 USD, savings rate: 96.6%).

Red: non-achieved tariff savings (2021: 213'230 USD).

Comparison of aggregated utilisation rates over the past years.
