

Analysis of the Utilisation of EFTA's Free Trade Agreements

FTA Monitor

Updated version August 2025

Background Information

This report summarises the most important information on each of EFTA's free trade agreements (FTAs) on the import and export side. In addition to general information on bilateral trade, it includes the share of duty-free trade, tariff savings and preference utilisation rates. The aim of this report is to enable interested readers to see all relevant figures at a glance in order to identify both successes and potential for improvement.

For each FTA partner country, one page is devoted to goods imported by EFTA and one page to goods exported by EFTA to said country, when available.

Methodology: The preference utilisation rate (PUR)

To calculate and compare the use of FTAs across time and countries, this report uses one central indicator, the preference utilisation rate (PUR):

$$\text{Preference utilisation rate (\%)} = \frac{\text{Trade value of preferences used}}{\text{Trade value of preferences that could be used}}$$

The PUR represents the value of traded goods for which economic operators actually make use of the FTA in relation to the total value of traded goods for which economic operators are entitled to make use of the FTA.*

Scope

The scope of this report covers both imports and exports between EFTA and FTA partner countries for the period 2018–2023.

For imports, all of EFTA's FTA partners are covered by the study, based on the data of the customs authorities of individual EFTA Member States. The Principality of Liechtenstein belongs to the Swiss customs territory and its trade is included in the Swiss trade statistics.

For exports, this report relies on data provided by FTA partner countries that have agreed to exchange the data required for this analysis. Consequently, the scope on the export side is limited to those countries that have provided such data, namely Albania, Bosnia and Herzegovina, Canada, Chile, Colombia, Costa Rica, Ecuador (starting from 2021 as entry into force of FTA in November 2020), Hong Kong, Indonesia (starting from 2022 as entry into force of FTA in November 2021), Montenegro (2021–2023), Morocco (2019–2023), North Macedonia, Panama, Peru (2019–2023), Philippines (2019–2023; entry into force of FTA for most parties in June 2018), Republic of Korea, Serbia, Singapore, Türkiye and Ukraine (2021–2023). EFTA is continuing in its efforts to expand coverage on the

*Further details regarding the methodology for this report can be found in the [Swiss study "Analysis on the use of free trade agreements"](#).

export side.

At the beginning, aggregate output pages are presented for EFTA's overall imports in 2023 and exports to those FTA partners that provided 2023 data.

Limitations

The data on preference utilisation in this report is based on import data collected and processed by different parties. Thus, the existence of different sources for the import data might limit the accuracy of the output due to possible differences in data and methods used.

Trade in gold (tariff line 7108.12) is excluded from the main analysis as per standard practice in EFTA's statistics. In addition, preferences within tariff rate quotas, variable tariffs (e.g. price band systems, input-based tariffs or seasonal tariffs) and ex-outs within tariff lines have not been considered in the calculations due to the difficulty in quantifying them through the available customs statistics. Trade under preferential schemes other than FTAs has been included in the analysis of overall trade flows, but not in the assessment of applicable tariff rates and preference utilisation, given the lack of data on the tariffs applicable under those schemes.

Subject to national laws, regulations and procedures in the EFTA Member States and its FTA partners, trade under certain tariff lines may be confidential and therefore not shown in the report. As a result, trade under certain tariff lines has been removed from the tables in the lower part of each country page to ensure statistical confidentiality.

Explanation of this report

Information

The upper part of each country page contains information on the FTA and overall trade, including the entry into force of the FTA and trade values for 2023 with and without trade in gold (tariff line 7108.12). Values are indicated consistently in US dollars (USD). The information section also details the PUR for 2021–2023. In instances where the PUR is not applicable (e.g. if the FTA in question was not in force at the beginning of the specific year or all imports occurred under MFN zero), a “–” is indicated.

All monetary values are converted from national currencies to USD using the [IMF's yearly average exchange rates](#) for the given period.

Graphs

Below, the different graphs depicted in this report are explained. It is important to note that the data analysed and results presented do not represent total trade flows but only a subset thereof. Gold as well as products with import quotas have been excluded from the analysis.

The first graph (top left) shows the imports or exports for all years analysed, illustrated according to the four trade regimes: FTA, MFN zero, MFN, and other preferences. The graph therefore gives an overview of the relevance of the different trade regimes, including of the particular FTA. Results can vary significantly depending on the tariff structure of each country. For example, the report on exports to Hong Kong and Singapore shows that all exports were categorised as MFN zero. Regarding the category “other preferences”, categorisations may vary across customs authorities. For example, some countries include inward processing schemes, imports into free zones, duty suspensions and Generalised System of Preferences (GSP) preferences in this category, while others do not. Trade under “other preferences” may be duty-free and therefore by definition lower the use of FTA preferences for some partners, for example in the case of Canada. Due to a lack of data on applicable tariffs, trade under “other preferences” is excluded from the PUR analysis.

The second graph (top right) shows the duty-free share of imports/exports in the most recent year covered by this report. The calculation of duty-free trade is based on the subset of data considered by this report. Therefore, it excludes other preferential schemes and applies other exclusions described above. Tariff lines under duty-free trade are those subject to either an MFN or a preferential tariff rate of zero.

The third graph (bottom left) shows tariff duties revenue. In addition to the duties actually paid, the hypothetical tariff savings have been included both in the graph and numerically in the heading. These hypothetical tariff savings are calculated by multiplying trade flows with the respective FTA or

MFN tariffs.

The fourth graph (bottom right) compares the aggregated utilisation rates over the past years, allowing a comparison of the use of each FTA over the time period for which data is available.

Table

In the lower part of each country page, the report features a table with key figures for selected products. The product groups are simplified descriptions based on the Harmonised System (HS) of the World Customs Organization (WCO), either in the [2017](#) or [2022](#) version, depending on the data provided. The first part of the table displays the ten most important product groups (2-digit HS codes), sorted by trade value. In the lower section, the top ten products (6-digit HS codes) with the largest non-achieved tariff savings are listed. For products appearing recurrently in the lower table section, shortened descriptions of HS 6-digit labels are used. In instances where the PUR is 100% or not applicable (e.g. if trade occurs under MFN zero as in the case of EFTA's exports to Hong Kong), no information on the corresponding product(s) is provided in the lower section of the table. For all products / product groups, the trade values are shown according to trade regimes, the PUR, and the achieved and non-achieved tariff savings. If there is an indication of "0.00", the corresponding value may be at a lower-digit level. Additional information on the products with the highest non-achieved tariff savings can be obtained by clicking on the hyperlinks to the dedicated sections of the WCO website provided in the lower part of the table.

Explanations on the FTA Monitor

The upper part contains some general information and key figures.

Total imports/exports	Date of entry into force of the FTA
PUR from 2021-2023	
Imports/exports without gold and TRQs (if applicable)	

The relevant limitations are specified.

Decomposition of imports/exports over the past years by trade regime.	Duty-free share of trade in 2023.
Transactions in recent years according to the trade regime (FTA, MFN zero, MFN, other preferential treatment).	Pie chart representation of duty-free trade share in 2023.

Hypothetical tariff revenue according to FTA or MFN over time. Green: Achieved tariff savings. Red: Non-achieved tariff savings.	Comparison of preference utilisation rates over time.
Duty revenue if all imports had been made under FTA or MFN clauses. Actually paid tariffs are also indicated. The coloured areas show the realised and the non-realised tariff savings.	The preference utilisation rates over time are indicated.

	Product group	HS Code	Imports/Exports					Utilisation	Tariff savings	
			Total	MFN	MFN-zero	FTA	other	Rate (%)	achieved	non-achieved
			(in millions/thousands of USD)						(in thousands of USD)	
<i>The total import/export value is indicated.</i>										
Top-10 product groups with highest import/export values	<i>The top-ten product categories (two-digit HS codes) sorted by import/export value are displayed.</i>									
Top-10 products with highest non-ach. tariff savings	<i>The top-ten products (six-digit HS codes) with the greatest non-realised savings potential are displayed.</i>									
	<i>The detailed HS tariff headings are available by clicking on the hyperlink in the HS code column.</i>									

List of abbreviations

- **FTA:** Free trade agreement
- **HS:** Harmonised System
- **MFN:** Most-favoured nation
- **Other pref.:** Other preferential schemes
- **PUR:** Preference utilisation rate
- **TRQ:** Tariff-rate quota
- **USD:** United States dollar

EFTA: Imports from all FTA partners 2023

Imports

Total imports: 60.4 bln. USD

Date of entry into force of the FTA: 01.01.2003

Preference utilisation rate: 38.3% (2021), 30.7% (2022), 30.7% (2023)

Imports without gold and TRQs: 29.61 bln. USD

Analysis of imports without unwrought gold (7108.12) and TRQs for Switzerland. Preferences within TRQs, variable tariffs and ex-outs within tariff lines have not been considered. Confidential trade is excluded from the tables.

Decomposition of imports over the past years by trade regime.

2023: FTA (10.6%), MFN zero (51.2%), MFN (24%), other pref. (14.3%).

Duty-free share of trade in 2023.

Hypothetical duty revenue according to MFN or FTA.

Green: achieved tariff savings (2023: 152'680'020 USD, savings rate: 64.7%).

Red: non-achieved tariff savings (2023: 83'227'130 USD).

Comparison of aggregated utilisation rates over the past years.

		Product group	HS code	Imports				Utilisation Rate (%)	Tariff savings

EFTA: Exports to Chile 2023

Exports

Total exports: 0.52 bln. USD

Date of entry into force of the FTA: 01.12.2004

Preference utilisation rate: 49.8% (2021), 42.1% (2022), 59.6% (2023)

Exports without gold: 0.51 bln. USD

Analysis of exports without unwrought gold (7108.12). Preferences within TRQs, variable tariffs and ex-outs within tariff lines have not been considered.
Confidential trade for Norway is excluded from the tables.

Decomposition of exports over the past years by trade regime.
2023: FTA (45.3%), MFN zero (11.4%), MFN (43.2%), other pref. (0.1%).

Duty-free share of trade in 2023.

Hypothetical duty revenue according to MFN or FTA.

Green: achieved tariff savings (2023: 13'725'280 USD, savings rate: 59.6%).

Red: Non-achieved tariff savings (2023: 9'307'960 USD).

Comparison of aggregated utilisation rates over the past years.

EFTA: Exports to Hong Kong 2023

Exports

Total exports: 18.57 bln. USD

Date of entry into force of the FTA: 01.10.2012

Preference utilisation rate: – (2021), – (2022), – (2023)

Exports without gold: 8.6 bln. USD

Analysis of exports without unwrought gold (7108.12). Preferences within TRQs, variable tariffs and ex-outs within tariff lines have not been considered.
Confidential trade for Norway is excluded from the tables.

Decomposition of exports by trade regime.
2023: FTA (0%), MFN zero (100%), MFN (0%), other pref. (0%).

Duty-free share of trade in 2023.

Hypothetical duty revenue according to MFN or FTA.

Green: achieved tariff savings (2023: 0 USD, savings rate: —%).

Red: Non-achieved tariff savings (2023: 0 USD).

EFTA: Imports from the United Arab Emirates 2023

Imports

Total imports: 10.69 bln. USD

Date of entry into force of the FTA: 01.07.2014

Preference utilisation rate: 19.1% (2021), 20.1% (2022), 7.0% (2023)

Imports without gold and TRQs: 0.97 bln. USD

Analysis of imports without unwrought gold (7108.12) and TRQs for Switzerland. Preferences within TRQs, variable tariffs and ex-outs within tariff lines have not been considered. Confidential trade is excluded from the tables.

Decomposition of imports over the past years by trade regime.

2023: FTA (1.6%), MFN zero (27.2%), MFN (21.3%), other pref. (49.9%).

Duty-free share of trade in 2023.

Hypothetical duty revenue according to MFN or FTA.

Green: achieved tariff savings (2023: 944'240 USD, savings rate: 48.5%).

Red: non-achieved tariff savings (2023: 1'004'630 USD).

Comparison of aggregated utilisation rates over the past years.

EFTA: Imports from South Africa 2023

Imports

Total imports: 4.75 bln. USD

Date of entry into force of the FTA: 01.05.2008

Preference utilisation rate: 18.0% (2021), 14.5% (2022), 20.9% (2023)

Imports without gold and TRQs: 0.99 bln. USD

Analysis of imports without unwrought gold (7108.12) and TRQs for Switzerland. Preferences within TRQs, variable tariffs and ex-outs within tariff lines have not been considered. Confidential trade is excluded from the tables.

Decomposition of imports over the past years by trade regime.

2023: FTA (8.6%), MFN zero (54.8%), MFN (32.8%), other pref. (3.8%).

Duty-free share of trade in 2023.

Hypothetical duty revenue according to MFN or FTA.

Green: achieved tariff savings (2023: 3'713'900 USD, savings rate: 54.3%).

Red: non-achieved tariff savings (2023: 3'124'690 USD).

Comparison of aggregated utilisation rates over the past years.
